

GLOBAL GROUP OF COMPANIES INC.

PRESS RELEASE

NATIONAL CLINIC COMPANY ESTABLISHED

TORONTO, Canada – January 27, 2006

HealthNet is a Canadian company that currently provides primary care services in over 800,000 patient visits from its eight integrated “**Care Centres.**” These Care Centres combine Family Medicine, Urgent Care, and diagnostic/ancillary services. They are located in Mississauga, London, Toronto, Ottawa and Sarnia, Ontario.

HealthNet has entered into a strategic partnership with **ICC Global Group of Companies Inc. (ICC)**, to create **ICC HealthNet Canada Inc. (ICCHN)**. ICC is a privately-held, multifaceted group of corporations with affiliates in London (UK), Miami, New York, Frankfurt, Dubai, Rome and the Canadian corporate office in Toronto. Their subsidiary businesses include: insurance, real estate, import & export, natural resources, tax assistance programs, sports & entertainment management, and venture capital.

ICC HealthNet will continue to strive to achieve a high degree of patient satisfaction by providing seamless access to an integrated set of quality healthcare services at the Care Centres; while increasing cost-effectiveness, by facilitating the most appropriate use of self-care, primary care, emergency or specialist services. ICCHN will expand their Care Centre clinical model, with new locations in Brampton, Edmonton, Calgary, and Collingwood; and expansion of services provided in the existing clinics in London and Ottawa.

ICC HealthNet endeavours to create a productive and professionally gratifying environment for their clinicians; which includes allopathic, complimentary and alternative healthcare practitioners. Recently, the first U.S. licensed family physician was recruited to relocate and practice at the Sarnia-Lambton Care Centre. This is representative of the high quality practice environment of the Care Centres and widens the opportunities of recruitment for all of the new and existing clinics. In 2006, ICCHN will implement Electronic Health Records (EHR). EHR will further improve the clinician’s practice efficiency (and satisfaction) and will result in patient access to their medical information, health & wellness and adherence programs.

This year will also see ICC HealthNet embark on significant ventures in other healthcare markets. We will complete the acquisition of a multi-location rehabilitation/physiotherapy provider that will complement the existing Care Centre locations. In addition, ICCHN has acquired the Canadian licensing rights to an alternative drug sampling system – Dispense as Patient Starter (DAPS™) – that has proven successful with major pharmaceutical companies in the United States. DAPS™ will be launched in the first quarter of 2006 and will conduct its product trial programs, in partnership with major retailers in Canada.

ICC HealthNet Canada Inc. will continue to provide quality care to our patients and the drive to become the leading national provider of integrated primary healthcare services in Canada.
